(1) Search channels using the receiver menu or you can upload one off factory channel list and add missing channels.

(2) Then plug the USB stick. Go to the update via USB. As a kind of update, select Dump. Then select Start to save the file with all the software on a USB memory stick.

(3) Go to the computer and run ArivaEditor. Select **File -> Open** to open the saved file.
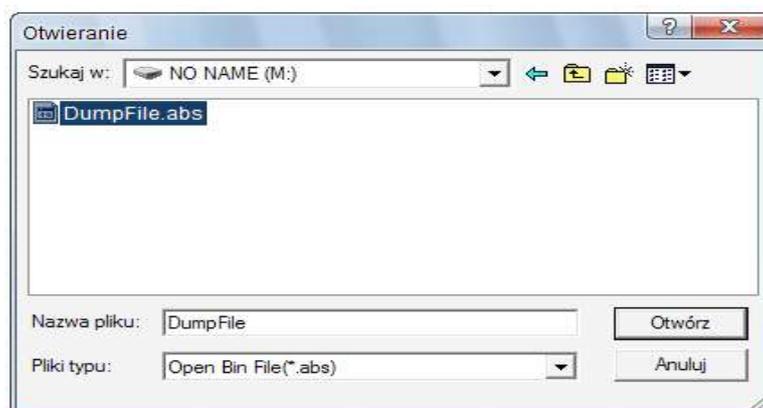

(4) Then select the **userdb** - ie the user's database, which is a list of saved channels.
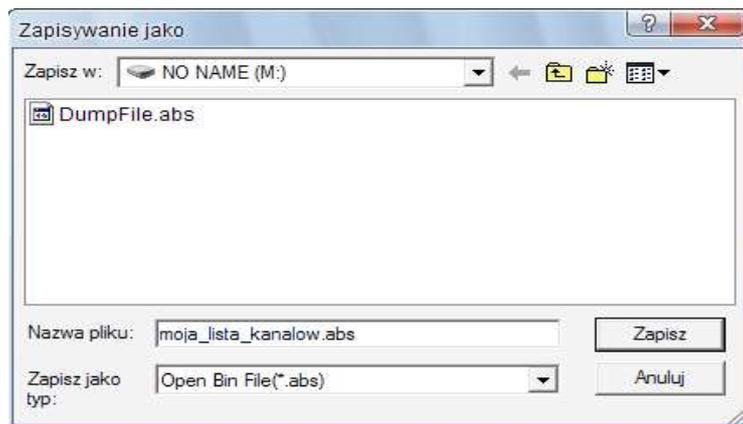

◆FERGUSON
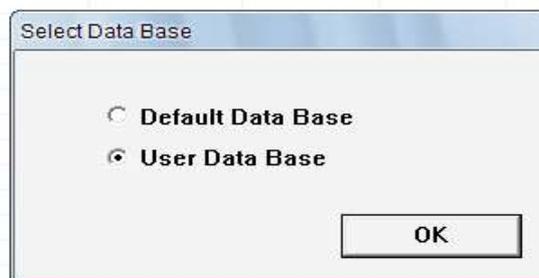

(5) Click on **All Services** to view a list of channels. You can now change the order, edit, add and delete channels.

(6) When you finish editing, select *File -> Export* and save a new file with *.abs extension.

(7) To upload a list of channels to your receiver, go to update via USB. As a upgrade mode, select **userdb**. Next select the previously saved file and press start.
